

## Heimdall Power

# Environmental Policy

The Heimdall Power's business model is based on a green global mission and Heimdall Power contributes to several UN sustainability goals. Heimdall Power is committed to managing environmental impact in a responsible & effective way and continuously improving the environmental performance. Also contributing to climate-positive progress by decarbonizing our operations and supply chain.

We establish our Environmental Management System as per the ISO 14001 requirements and best practices.

We continuously work on improving our products, services, and processes to minimize the environmental impact and operating with a minimal environmental footprint.

We see the environmental regulations, legislations, and codes of practice relevant to the industry in which we operate as the lowest requirements to fulfil.

We actively source environment-friendly parts and components and encourage our major contract manufacturers and suppliers to develop similar environmental policies.

We set meaningful environmental objectives and ensure all personnel understand and contribute to the achievement of the objectives.

We continuously improve our environmental impact and our management system by educating and training our employees in environmental issues and the environmental effects of our activities, and we continuously identify and manage our environmental risks.

Jørgen Festervoll, CEO, 17.02.2023
